Jarlin Andrés Fonseca Bermón

Backend Developer | APIs, Microservices & Integrations | AWS · Azure APIM
Cúcuta, Colombia • +57 323 812 3367 • jarlinandres5000@gmail.com • linkedin.com/in/jarlinfonseca • github.com/JarlinFonseca

PROFESSIONAL SUMMARY

Backend Developer with 3+ years designing APIs, services and integrations that run in production and support thousands of users. Specialized in scalable, business-oriented backend with Java/Spring Boot and Node.js/NestJS, applying hexagonal architecture, Clean Architecture and SOLID principles, with automated testing (JUnit 5, Mockito). Experienced in REST API integration, event-driven architectures and managing API platforms at scale with Azure API Management, plus deploying and operating services on AWS. Self-taught and results-oriented.

TECHNICAL SKILLS

Languages: Java, TypeScript, JavaScript, SQL, PL/SQL

Frameworks / Backend: Spring Boot, NestJS, Node.js, REST APIs, Microservices, WebSockets (Socket.IO)

Architecture: Hexagonal Architecture, Clean Architecture, SOLID Principles, Event-Driven Design (RabbitMQ)

Databases: PostgreSQL, MySQL, SQL Server, Oracle (stored procedures, views, functions, tuning)

Cloud / DevSecOps: AWS (EC2, RDS, ECS, S3, Cognito, API Gateway, IAM, CloudWatch), Azure API Management, Azure DevOps, Docker, CI/CD, SonarQube, GitHub Actions, Kubernetes

Testing: JUnit 5, Mockito

Tools / Methodologies: Git/GitHub, GitFlow, Maven, Gradle, Postman, Jira, SCRUM

PROFESSIONAL EXPERIENCE

Nelumbo Consultores
Cúcuta, Colombia (Hybrid)
Backend Developer
Feb 2024 – Present

- Administer **Azure API Management** for SURA Mexico, governing **100+ APIs**: security policy definition, credential management and service standardization for secure, consistent cross-system consumption.
- Enable technical API consumption for **external partners**: generate credentials, configure products and policies in APIM, document usage and support the integration of the company's services.
- Built the **Warranty Portal** in NestJS with a modular architecture, deployed to production and used by **700+ stores** and thousands of users across Mexico; digitized warranty management (previously a manual process) and integrated AWS S3 for document storage and an email notification service.
- Implemented a **real-time web chat** with NestJS, Socket.IO and WebSockets, in production and used under high concurrency by **4,000+ employees**.
- Built an analytics database in **PostgreSQL** and its **ETL** process from scratch, migrating historical data from existing systems and feeding **40+ business indicators** in a dashboard via optimized SQL queries.
- Implemented asynchronous messaging with **Amazon MQ (RabbitMQ)** to connect two microservices, ensuring reliable data persistence without blocking the main flow or losing messages.
- Developed a **bulk-load API** in Spring Boot with asynchronous multi-threaded processing, enabling registration of thousands of records (users, services and other entities) in a single operation —previously a one-by-one manual load— without blocking the main thread.
- Built the **Management Panel (Guatemala)** from scratch, a Spring Boot API with hexagonal architecture over SQL Server; implemented business logic in the database (stored procedures, views and functions) tuned for performance, serving **900+ users**.

Pragma
Cúcuta, Colombia (Remote)
Backend Developer & DevSecOps
Mar 2023 – Sep 2023

- Automated the CI/CD of the achievements microservice (**Crezi**) across its **3 environments** (develop, QA, production) and implemented the build across the project's 3 microservices, standardizing pipelines with reusable templates.
- Integrated static code analysis with **SonarCloud** in each microservice, adding automated quality control to the deployment flow.

- Built the backend of a food-court application from user stories, deploying it as a microservice on AWS with an end-to-end automated CI/CD pipeline.
- Developed new features in Pragma's onboarding platform with Spring Boot, working in sprints under SCRUM, and supported environment configuration for production.
- Built an internal solution to automate the registration and assignment of available staff, implementing business logic and endpoints in Google Apps Script over a Bubble.io interface, replacing a manual spreadsheet-based process.

EDUCATION

Universidad Francisco de Paula Santander — Cúcuta, Colombia
B.Sc. in Systems Engineering — Feb 2018 – Nov 2023

Inglés para Todos (IPT) — Cúcuta, Colombia
Intermediate English Level (B1) — Mar 2018 – Dec 2019

SENA — Cúcuta, Colombia
Administrative Assistance (Technical Program) — Feb 2016 – Dec 2017

Colegio Gremios Unidos — Cúcuta, Colombia
Technical High School Diploma — Feb 2016 – Dec 2017

CERTIFICATIONS & COURSES

- **AWS Academy Graduate — AWS Academy Cloud Foundations** · AWS (2023)
- **Spring WebFlux and Reactive Programming** · Udemy (2026)
- **Kubernetes and Docker on AWS from Scratch** · Udemy (2023)
- **Microservices with Spring Boot and Spring Cloud Netflix Eureka** · Udemy (2023)
- **DevOps and Cloud with Azure DevOps, App Service, Pipelines and Git** · Udemy (2023)
- **Complete JUnit and Mockito Guide incl. Spring Boot Test** · Udemy (2023)
- **CCNA: Introduction to Networks** · Cisco (2023)
- **Professional Git and GitHub Course** · Platzi (2022)
- **Database Programming with SQL** · Oracle (2021)

LANGUAGES

Spanish: Native **English:** Intermediate (B1)

ACADEMIC EXPERIENCE & PROJECTS

Universidad Francisco de Paula Santander — Cúcuta, Colombia
Web Developer & Researcher (Redcolsi) — 2018 – 2023

- Developed **SAGIS** (Graduate Tracking & Support Web System) as a monolithic Laravel application, with Blade views and HTML/CSS interfaces.
- Built web systems and pages with HTML, CSS, Bootstrap, JavaScript and MySQL databases; implemented the Lubrillantas Jezreel AG web app with Java on the server side.
- Coordinated and led multidisciplinary teams of up to 8 members on real projects in project-management and formulation courses.
- Speaker at **Redcolsi** (Colombian Network of Research Seedbeds) presenting the digital-fabrication and 3D-printing project of the UFPS FabLab, with outstanding regional and national scores.

No Country — Remote
Backend Developer — Technical Simulation — Nov 2023 – Dec 2023

- Led a backend team under SCRUM in a job simulation: assigned tasks, developed a Spring Boot + MySQL API for an educational platform and deployed on AWS (RDS, Elastic Beanstalk, Parameter Store) with Docker.
